ABOUT ME

I am Bariq Firjatullah, a Full-Stack Developer with 3+ years of experience in building scalable web applications and internal systems. I specialize in JavaScript/TypeScript ecosystems, particularly Node.js, React, and Laravel, with strong experience in backend development, API design, and database management.

Throughout my career, I have worked on various projects ranging from company profile websites, LMS platforms, subscription systems, to AI-powered applications. I also have hands-on experience in DevOps practices, including CI/CD pipeline setup, server deployment, and VPS management using Docker and Nginx.

In addition, I have experience working with AI systems, including prompt engineering and optimization to improve accuracy and consistency of AI-generated outputs. I am passionate about building efficient, maintainable, and user-focused digital products.

EDUCATION

SMKN 4 Malang

May 2018 – May 2021

Software Engineer

EXPERIENCE

- PT Skyshi Digital Indonesia – Full Stack Developer

Aug 2025 – Present

  - Developed and maintained full-stack web applications, handling both frontend and backend development using modern web technologies.
  - Built and optimized backend services, including API development, database design, and system integration.
  - Managed DevOps processes such as deployment setup, CI/CD pipeline configuration, and server environment maintenance.
  - Implemented and maintained application deployment workflows to ensure scalability and system reliability.
  - Assisted in AI prompt adjustment and optimization to improve AI-generated outputs for internal tools and workflows.
- PT. Karisma Garuda Mulia – Instruktur & Web Developer

Sep 2022 – Juli 2025

  - Taught and mentored over 50 participants in web development (HTML, CSS, JS, PHP, Laravel, React).
  - Managed server infrastructure (VPS), including the configuration of Nginx, Docker, and CI/CD with GitHub Actions.
  - Developed a curriculum tailored to industry needs.
  - Built and managed an internal web application for course management.
- PT SiCepat Express Indonesia – Data Entry

Sep 2021 – Sep 2022

  - Manage and ensure the accuracy of package shipping data in the system.
  - Coordinate with the logistics team to expedite the shipping process.
  - Maintain the efficiency of the data entry process to improve operational productivity.
- CV. RedLevl Mediatama – Web Developer

Des 2019 – Des 2020

  - Developed a company profile website using PHP and CodeIgniter.
  - Created SEO-optimized article content.
  - Implemented a backlinking strategy for off-page SEO.

PROJECT EXPERIENCE

LMS Prakerja Karisma Academy (PT Karisma Garuda Mulia)

Dec 2023 – May 2024

Developed and managed an internal web application for webinar and self-learning video course management. The project was built using React, Hono, Laravel, and MySQL, and implemented third-party APIs from Prakerja and Flip. The deployment process was automated via a VPS with CI/CD GitHub Actions.

Responsibility:

- As the Backend Developer, developed and managed server-side logic using Hono, Laravel, and MySQL.
- Fully responsible for integrating third-party APIs from Prakerja and Flip to support the platform's key features.
- Collaborated with the Frontend Developer to ensure smooth API integration.
- Implemented and managed a CI/CD workflow using GitHub Actions for automated deployment to a VPS.

Team size (number of team): 2 people (1 Backend, 1 Frontend)

Tools: React, Hono, Laravel, MySQL, VPS, CI/CD (GitHub Actions), API Prakerja, API Flip

LMS Bootcamp Karisma Academy (PT Karisma Garuda Mulia)

Feb 2025 – Jul 2025

Developed and managed a Learning Management System (LMS) specifically for bootcamp classes. The platform was designed to support the learning process, participant management, and payment system integration.

Responsibility:

- As the Backend Developer, responsible for developing backend APIs using Laravel and Hono.
- Managed the MySQL database and implemented object storage using Minio.
- Integrated the Xendit API to process payments.
- Managed deployment via Docker and Github CI/CD to a VPS.
- Conducted API testing using Postman and collaborated with the frontend team.

Team size (number of team): 4 people (3 frontend, 1 backend)

Tools: Laravel, Hono, Next.js, MySQL, Docker, Minio, Github CI/CD, Xendit API, VPS, Postman

Gym Subscription Project (Freelance)

Apr 2024 – May 2024

Developed a subscription management system for a gym, covering member registration, payment management, and class scheduling. This project was built as a standalone solution to meet the client's operational needs.

Responsibility:

- As the sole Full-Stack Developer, was fully responsible for the entire development lifecycle, from frontend to backend.
- Developed the frontend using React.js and the backend API with Laravel.
- Designed and managed a MySQL database to store member and transaction data.
- Deployed the application to cPanel and implemented CI/CD with GitHub Actions.

Team size (number of team): 1 person

Tools: Laravel, React.js, MySQL, cPanel, Github Actions CI/CD

Company Profile & Clinic Reservation Website (Freelance)

Dec 2023 – Jan 2024

Developed a company profile website for a clinic, equipped with an online reservation feature. The project was built to make it easier for patients to view services and book appointments digitally.

Responsibility:

- As the sole Full-Stack Developer, was fully responsible for the entire development process, from design to deployment.
- Developed the backend using CodeIgniter and designed the user interface with Bootstrap.
- Deployed to cPanel and implemented CI/CD using GitHub Actions for automation.

Team size (number of team): 1 person

Tools: CodeIgniter, Bootstrap, cPanel, Github Actions CI/CD

**Product Sales & Catalog Website (Freelance)**

**Apr 2025 – May 2025**

Developed a product sales and catalog website designed to display product listings, details, and facilitate the ordering process. The project was built to support online product sales for the client.

Responsibility:

- As the sole Full-Stack Developer, was fully responsible for the entire project development lifecycle.
- Developed the backend using Laravel and the frontend with React.js.
- Designed and managed a MySQL database for product and transaction data.
- Deployed to cPanel and implemented CI/CD with GitHub Actions for automation.

Team size (number of team): 1 person

Tools: Laravel, React.js, MySQL, cPanel, CI/CD GitHub Actions

**Anarise (PT Skyshi Digital Indonesia)**

**Aug 2025 – Nov 2025**

ANArise is a digital assessment and talent development platform designed for companies to identify, evaluate, and nurture top-tier developer talent through real-world, project-based simulations. By leveraging cutting-edge technologies like React.JS, Vue.JS, and Node.JS, ANArise helps organizations assess technical capabilities, issue certifications, and build reliable developer profiles based on actual performance — making it easier to hire, upskill, or benchmark tech talent with confidence.

Responsibility:

- Developing front-end features using React.JS & Vue.JS and building RESTful APIs with Node.JS.
- Performing testing, debugging, performance optimization, and application deployment.
- Collaborating with PM & QA in sprint-based development.

Team size (number of team): 4 person (1 Project Manager, 1 Quality Assurance, 2 Full Stack)

Tools: React.js , [Node.js](#), Vue.js

**ANArag (PT Skyshi Digital Indonesia)**

**Oct 2025 – Dec 2025**

ANArag is designed to streamline and automate document retrieval for recommendation processes across various organizational divisions by leveraging Generative AI. The platform enables efficient management and processing of diverse document types, extracting relevant insights, and providing tailored recommendations. By minimizing reliance on manual expertise, ANArag enhances decision-making and operational efficiency across multiple functions, including HR, finance, business, IT and legal. This allows organizations to optimize workflows, improve knowledge management, and deliver structured guidance for a wide range of processes. Additionally, ANArag drives business value by reducing operational costs, increasing productivity, and enabling faster, data-driven decisions that enhance overall organizational agility and competitiveness.

Responsibility:

- Migrate and reimplement front-end design using a new template with React.js.
- Upgrade RagFlow to the latest version and ensure compatibility with existing systems.
- Create and improve deployment scripts (Docker & server configuration) to improve the stability and efficiency of the release process.
- Perform testing, debugging, and coordination with PM & QA to ensure smooth deployment and application performance.

Team size (number of team): 4 person (1 Project Manager, 1 Quality Assurance, 2 Full Stack)

Tools: React.js, Node.js, Docker, RagFlow

**Gethired (PT Skyshi Digital Indonesia)**

**Nov 2025 – Dec 2025**

GetHired is a career preparation platform with civil service and state-owned enterprise tryouts, programmer tests, and CV makers, equipped with the AI Mentor feature to support job exam preparation.

Responsibility:

- Optimizing and improving AI chatbot prompts (Dify & OpenAI) to enhance the accuracy, relevance, and consistency of responses.
- Designing and developing automation test scripts (JavaScript) to periodically test the stability and consistency of chatbot responses.
- Evaluating and tuning the performance of AI Mentor based on test results.
- Collaborating with QA in the testing, debugging, and validation of features prior to deployment.

Team size (number of team): 3 person (1 Quality Assurance, 2 Full Stack)

Tools: Dify, OpenAI, Javascript

**UjianAI (PT Skyshi Digital Indonesia)**

**Dec 2025 – Feb 2026**

UjianAI is an AI-powered solution that enables users to upload exam or quiz images and instantly receive generated answers along with clear explanations. The platform simplifies question solving by leveraging AI to process image-based problems quickly and accurately.

Responsibility:

- Designing and implementing AI workflows in Dify to process image-based questions into structured outputs.
- Engineering and refining prompts (OpenAI & Gemini) to improve accuracy and response consistency.
- Developing automation test tools to validate AI responses across multiple question image scenarios.
- Performing evaluation and iterative improvements based on testing results to ensure output reliability.

Team size (number of team): 3 person (1 Quality Assurance, 2 Full Stack)

Tools: Dify, OpenAI, Gemini, Javascript

**CERTIFICATION**

---

- [Pemrograman Web Level 4 KKNI - LSK](#)
  - [DevOps Engineer – Digital Skola](#)
- Published, 2022**

**Published, 2025**

**SKILL**

---

- **Languages & Frameworks:** JavaScript, TypeScript, Node.js, React, Vue, PHP, Laravel, CodeIgniter
- **Backend & API:** RESTful API, MySQL, Authentication, Third-party Integration
- **DevOps:** Docker, CI/CD (GitHub Actions), VPS, Nginx
- **AI & Tools:** OpenAI, Dify, Prompt Engineering, Automation Testing
- **Other:** Git, SEO Basics, Problem Solving, Team Collaboration
